

AMENDMENTS TO THE SPECIFICATION

IN THE SPECIFICATION:

Please replace the paragraph beginning on page 3, line 33 with the re-written paragraph below:

The collar 27 is keyed to the terminal portion 22 by projections 29 on the housing which engage slots 30 in the collar 27 of the fan. This stops the fan 20 rotating about the terminal portion 22 and limits axial movement of the fan 20 towards the motor core 16. Larger cut-outs 31 in the collar 27 snugly accepts the housing giving additional rotational integrity. Resiliently deformable fingers 23 extend axially from the slots 30. The distal end of the fingers has a tapered head 32 with a square shoulder 33.
